Delivering the Cloud Experience

Deployments & Integrations

Deploying and integrating workloads to a cloud platform, whether public or private, can be a daunting and resource intensive task. Cloud deployments and integrations fail for two primary reasons, lack of planning, and lack of expertise. Remove the risk of failure, and expedite your cloud ROI, by allowing Skyrym to deploy and integrate your workloads to the cloud.

Deploy, Secure, and Manage

How do I effectively deploy, secure, and operate my applications and services in the cloud? Our focus at Skyrym is to deliver a day-one solution enabling immediate day-two operations in the cloud. Whether deploying infrastructure, platform, or software as a service we will execute with you or completely on your behalf. Furthermore, Skyrym will connect you with quality managed service providers to deliver day-one operations across the IT stack. Finally, we will continue to provide value with follow on re-baselining, performance tuning, and compliance validation to ensure your cloud services and development pipelines are functioning optimally.

Day-One Operations

Infrastructure Deployment & Integration

Whether your applications lend themselves to leveraging cloud native infrastructure services or deploying within your own IT stack into the cloud, Skyrym will ensure that your deployments perform to meet your business requirements.

Platform Deployment & Integration

Develop, run, and manage your applications and services without the complexity of building and managing the underlying infrastructure. From development pipelines and build tools, to containers and integration platforms, Skyrym will help you realize the full value of PaaS and provide the foundation necessary to implement a DevOps practice.

Automation and Orchestration

Realizing the total value of the cloud means leveraging automation and orchestration to the fullest extent possible. Whether operating IaaS, PaaS, BPaaS, or SaaS services, developing robust and mature automation and orchestration capabilities are key enablers to achieving success in the cloud. Skyrym will help you develop and execute these capabilities by either leveraging your existing tools and workflows or developing and deploying new capabilities and tools that are aligned with your cloud objectives.

Software Deployment & Integration

Please see our DevOps brochure for more information on Skyrym's software deployment and Integration practices.

Cloud Operations

Allow Skyrum to assist you in optimizing your infrastructure operations within any cloud model. We will also recommend real value added managed service providers to run your infrastructure for you, unburdening your business to focus on the bottom line rather than IT infrastructure.

Cloud Managed Services

Why manage your infrastructure when you don't have to? Skyrum will connect you with reliable managed service providers that will run your "Day-one" cloud operations activities on your behalf, allowing you to focus on your businesses core competencies.

Day-Two Operations

Cloud Baseline

To get where you want to be, you must first understand your starting position. Skyrum will help you establish operational and performance baselines within your existing cloud ecosystems. These baselines are necessary to align your operational levels with your service level expectations.

Cloud Security Compliance

Information security is still one of the top concerns when deploying into the cloud. Our security compliance check will validate your cloud deployments versus your company's security controls policies. If exceptions are found, Skyrum will help you correct them.

Cloud Services Optimization

Whether you are moving toward cloud native services, modifying application design patterns, deploying into a platform, or modifying people, processes, and tools, Skyrum will help you optimize your cloud services use to maximize efficiency and availability, while also minimizing cost.

Cloud Consulting & Engineering Services

- ◇ Service Architecture and Strategy
- ◇ Design and Planning
- ◇ Workload Migrations
- ◇ Information Security
- ◇ Automation and Orchestration
- ◇ DevOps

Skyrym's experience will help you achieve success through the implementation of secure cloud solutions. Our flexible consulting services will meet any of your business requirements.
